AIF7002 AI Foundations in Practice
Assessment 2: Applied AI Reflection

School of Computing, Northbridge University (2026-27, Teaching Block 1)

Key information

Weighting: 60% of the module mark.
Submission deadline: Thursday 26 November 2026, 16:00 (UK time).
Submit a single PDF through the Assessment 2 submission point on the module page.
Word limit: 3,000 words, excluding references and appendices.

Overview

An organisation of your choice wants to automate one decision it makes today by hand. Reflect on how it should do so, drawing on the whole module.

The task

Your reflection should compare two different AI approaches to the same problem, for example a rule-based system and a learned model, and consider what each would demand of the organisation in data, expertise and maintenance. On the strength of that comparison, justify the implementation choice you would recommend to the organisation, acknowledging what it gives up.

A recommendation is only as good as the evidence behind it, so explain how the chosen system should be evaluated before launch and monitored after deployment. Your reflection must close by considering what responsible deployment would demand of the organisation: who remains accountable for its decisions, and how those affected could challenge them.

Assessment criteria

Marks are allocated to the comparison of approaches (25%), the justification of the recommended choice (25%), evaluation and monitoring (25%), responsible deployment (20%), and presentation and referencing (5%).
