AIF7002 AI Foundations in Practice
Assessment 1: AI Systems Case Study

School of Computing, Northbridge University (2026-27, Teaching Block 1)

Key information

Weighting: 40% of the module mark.
Submission deadline: Wednesday 18 November 2026, 12:00 (UK time).
Submit a single PDF through the Assessment 1 submission point on the module page.
Word limit: 2,000 words, excluding references and appendices.
Module leader: Dr Lena Moreau (l.moreau@northbridge.example).

Overview

Choose one AI system that is already in use, such as a triage chatbot, a fraud detection service or a route-planning assistant, and analyse it as a whole system: the model, the data it depends on, the people who use it and the people it affects.

What your case study must do

1. Identify the AI system, the task it performs and its intended users.
2. Discuss the limitations of the underlying model and when its outputs should not be trusted.
3. Evaluate the ethical and operational risks the system creates for the people who use it or are affected by it.
4. Propose practical safeguards that reduce the most serious of those risks.

Use publicly available information only; do not contact the organisation.

Marking criteria

System description and intended users: 20%
Model limitations: 25%
Risk evaluation: 30%
Safeguards: 20%
Presentation and referencing: 5%

Support

The Week 2 lecture and the risk workshop cover the material for this case study.
