DVS7003 Data Visualisation
Assessment 2: Interactive Dashboard Project

School of Computing, Northbridge University (2026-27, Teaching Block 1)

Key information

Weighting: 65% of the module mark.
Submission deadline: Tuesday 24 November 2026, 23:59 (UK time).
Submit a link to your dashboard and a design document of up to 2,000 words.

Overview

Build an interactive dashboard that helps a named group of users answer three to five questions about a public dataset of your choice.

The task

The dashboard itself should be an interactive visualisation that lets users explore the dataset rather than a set of static charts placed side by side. For each question it answers, you must justify the chart type you selected over the obvious alternatives.

Users should never have to search for what matters, so create a clear visual hierarchy in which the most important measure is seen first. The accompanying design document should record your design decisions and the alternatives you rejected, with a sentence on why each was rejected.

Assessment criteria

Marks are allocated to interaction design (25%), chart selection (25%), visual hierarchy (20%) and the design document (30%).
